RE: Recommendation For Stout Systems Development
DATE: Tuesday, 23 September, 1997

Stout Systems Development, Inc. was contracted to develop a complex client-server application, capable of running under Windows '95 and NT. Meetings were held with SSD, where SSD determined the number and caliber of SSD team members required for the project. SSD put together a very capable team, with expertise in networking communication, database design, user-interface design, and documentation. SSD worked with the Motorsports Department to propose a design that was within the timing and financial budget allocated for the project. SSD then progressed from the design to an implementation over a period of many months. Project milestones were met, even those predicted early within the project. The final deliverable was implemented as planned and exceeded expectations. The project documentation was complete and thorough.

I would recommend Stout Systems Development for other complex projects. It was a pleasure working with SSD. I look forward to doing other projects with SSD.

Sincerely,

Paul Fleck
