To Whom It May Concern:

Michigan Aerospace Corporation has been working with Stout Systems since November 1998. The engineers on the staff of Stout Systems have worked with our staff and complemented it with a degree of expertise that is extremely difficult to find in the present economy. Joseph Webster and David Rein were key personnel whose participation was critical to the success of the recent GroundWinds project. It is my expectation that Michigan Aerospace Corporation will continue to utilize the services and expertise of Stout Systems to complement and augment our staff on future projects, based on the tremendous successes that our companies have built together over the last two years.

Best regards,

Carl A. Nardell
*Vice President &
Chief Engineer*
